

## **Guidelines for Table Design in Manuscripts Submitted to The New Armenian Medical Journal**

Dear Authors,

To facilitate the process of designing articles that meet the requirements of our journal, we kindly ask you to follow these instructions:

1. The number of columns in a table should not exceed 10.
2. The number of rows in a table should not exceed 25.
3. Try to minimize the number of words to 3 in each cell of the table.
4. If a table does not meet these standards, please submit it to the editorial office before finalizing your design. We can suggest an optimal version that will comply with our format.
5. The number of tables in an article should not exceed 7.

We appreciate your cooperation in adhering to these guidelines.
